

CLAIM AMENDMENTS

1. (CANCELLED)
2. (NEW) A security apparatus comprising:
 - a section of material having two sides and a plurality of edges, including a top edge and a bottom edge;
 - an access means;
 - a plurality of coupling members that are each connected to said material; and
 - a plurality of attachment members selectively connected to said plurality of coupling members and selectively attached to a vertical or horizontal support structure;
 - wherein each of said plurality of attachment members is constructed for attachment to said vertical or horizontal support structure in a manner to permit fastening and unfastening of said attachment members from only one side of said material when attachment members are attached to said support structure and said section of material by said coupling members.
3. (NEW) The security apparatus of claim 2, wherein said section of material comprises tear-resistant material.
4. (NEW) The security apparatus of claim 2, wherein said section of material comprises Kevlar.
5. (NEW) The security apparatus of claim 2, wherein said section of material is opaque.
6. (NEW) The security apparatus of claim 2, wherein said access means comprises an opening in said section of material.
7. (NEW) The security apparatus of claim 6, further comprising a zipper wherein said opening is opened and closed with said zipper.

8. (NEW) The security apparatus of claim 7, wherein said zipper is extended so as to allow an individual to freely exit and enter when said zipper is open.

9. (NEW) The security apparatus of claim 6, wherein said opening is selectively secured with a lock.

10. (NEW) The security apparatus of claim 2, further comprising a belt that tightens and reduces slack in said section of material.

11. (NEW) The security apparatus of claim 10, wherein said belt is positioned at or near the bottom edge of said section of material.

12. (NEW) The security apparatus of claim 2, wherein at least one of said coupling members is disposed at or near one of said edges of said section of material.

13. (NEW) The security apparatus of claim 14, wherein at least one of said coupling member comprises a strap.

14. (NEW) The security apparatus of claim 15, wherein at least one of said coupling member further comprises a ring.

15. (NEW) The security apparatus of claim 14, wherein said coupling member comprises a grommet.

16. (NEW) The security apparatus of claim 14, wherein said coupling members comprises a rivet.

17. (NEW) The security apparatus of claim 2, wherein said attachment members comprise hooks.

18. (NEW) The security apparatus of claim 2, wherein said attachment members comprise hangers.

19. (NEW) The security apparatus of claim 2, wherein said attachment members comprise fasteners.

20. (NEW) A security system for protecting and safeguarding contents of a booth having an interior comprising:

a section of material having a plurality of side edges; and

a means for selectively securing two or more of said edges to a support frame; wherein said means for selectively securing includes a plurality of attachment members that can be disengaged only from the interior of said booth when two or more of said edges of said section of material are secured to said frame by said attachment members from the interior of the booth; and

wherein contents of said booth are substantially hidden when viewing said booth from a front of said booth at a distance during an operation of said security system.

21. (NEW) The system of claim 21, wherein said section of material is opaque.
22. (NEW) The system of claim 21, wherein said section of material is comprised of Kevlar
23. (NEW) The system of claim 21, wherein said means for selectively securing further comprises an article that forms an opening and is attached to said section of material.
24. (NEW) The system of claim 23, wherein said article is a loop.
25. (NEW) The system of claim 23, wherein said article is a strap.
26. (NEW) The system of claim 25, wherein said means for selectively securing further comprises a ring attached to said strap.
27. (NEW) The system of claim 23, wherein said article is a grommet.
28. (NEW) The system of claim 21, wherein said means for securing is fixed to said section of material.
29. (NEW) A security apparatus for guarding an interior area enclosed by three or more sides comprising:

a section of material;

a plurality of pairing members;

a plurality of fastening members for fastening said material to a support structure by said pairing members; and

a means for entrance and exit;

wherein said pairing members are connected to said material; and

wherein each of said plurality of fastening members are constructed for attachment to said structure in a manner to permit fastening and unfastening from only one side of said material when fastening members are attached to said structure with the section of material.

30. (NEW) The apparatus of claim 29, wherein said structure is a beam.
31. (NEW) The apparatus of claim 29, wherein said structure is an extruded pole.
32. (NEW) The apparatus of claim 29, wherein one or more of said fastening members comprise a tightening member.
33. (NEW) The apparatus of claim 32, wherein said tightening member is configured for opening by hand without the use of a tool.
34. (NEW) The apparatus of claim 33, wherein said tightening member comprises a finger hold for loosening and tightening said tightening member.
35. (NEW) The apparatus of claim 34, wherein said finger hold is circular.
36. (NEW) The apparatus of claim 32, wherein said tightening member is configured for opening by use of a tool.
37. (NEW) The apparatus of claim 36, wherein said tool is a drill.
38. (NEW) The apparatus of claim 36, wherein said tool is an Allen wrench.
39. (NEW) The apparatus of claim 32, wherein one or more of said fastening members comprise a handle portion for holding said fastening members while attaching said fastening members to said structure.
40. (NEW) The apparatus of claim 29, wherein one or more of said fastening members comprise a hooked portion for grasping an edge of said structure
41. (NEW) The apparatus of claim 29, wherein one or more of said fastening members comprise a tightening member that works in conjunction with a hooked portion to hold an edge of said support structure
42. (NEW) The apparatus of claim 29, further comprising a plurality of hanging members at a border of said section of material.

43. (NEW) The apparatus of claim 42, wherein said hanging members are selectively attachable from said border of said section of material.

44. (NEW) The apparatus of claim 42, wherein said hanging members comprise a hanging portion configured for hanging from a cross bar.

45. (NEW) The apparatus of claim 42, wherein said hanging members comprise a projection having an end, said end adapted for removable connection to a lifting device.

46. (NEW) The apparatus of claim 45, wherein said lifting device comprises a pole.

47. (NEW) The apparatus of claim 29, wherein each of said pairing members comprise a grommet.

48. (NEW) The apparatus of claim 29, wherein each of said pairing members comprise a ring.

49. (NEW) The apparatus of claim 29, wherein each of said pairing members comprise a strap.

50. (NEW) The apparatus of claim 29, wherein each of said pairing members comprise a rivet.

51. (NEW) The apparatus of claim 50, wherein said strap forms a loop.

52. (NEW) The apparatus of claim 29, wherein said entrance and exit means comprises a zipper disposed in said material.

53. (NEW) The apparatus of claim 29, wherein said entrance and exit means is securable by a belt.

54. (NEW) The apparatus of claim 53, wherein said entrance and exit means is further securable by a lock.
